

INFINITY Fish-Eye Inhibitor

Introducing Fish-Eye Inhibitor:

TDSM-Based Fish-Eye Inhibitor and Leveling Assist, specially formulated for use in both water-based and resin-based coating systems!

Introduction:

Infinity Effects presents the **TDSM-Based Fish-Eye Inhibitor & Leveling Assist**, a high-performance additive engineered to enhance both water-based and resin-based coating systems. Developed for demanding professional environments, this advanced formulation prevents fisheyes on challenging non-porous surfaces while simultaneously improving surface flow and leveling, helping to reduce orange peel during roller or spray application.

Unlike traditional fisheye additives, the Infinity Fish-Eye Inhibitor is **completely silicone-free**, eliminating the risk of silicone contamination making it ideal for controlled environments, spray shops, and industrial installations where cleanliness and coating integrity are critical.

Designed as a versatile, **multi-system solution**, this additive is an essential tool for decorators, flooring installers, and industrial coating specialists seeking a smoother finish, improved uniformity, and reliable defect prevention across a wide range of Infinity coating technologies. Only a small dosage is needed to achieve optimal performance, making it both efficient and cost-effective.

Recommended Dosage Guide:

- Polyurea Rapid Pigmented: 2% - 3%
- Diamond Coat: 0.5% - 2%
- ArmourGuard: 0.5% - 1%

For maximum performance, follow the recommended dosage rates based on your selected Infinity product and application technique.

Fish-Eye Inhibitor - Specification

Type	TDSM-Based Inhibiting Additive
Mix ratio	Consult Infinity Representative
Pack Sizes	100G
Colour	Clear
Shelf Life & Storage	12 months in original, unopened container. Store in cool, dry conditions
